A Declaration on Climate Change and Health

As leading public health, disease advocacy and medical organizations, we reiterate our longstanding commitment to addressing climate change as a public health issue. The statement below articulates our consensus on the health impacts of climate change and the need for action to protect the public's health.

- The health impacts of climate change demand **immediate action**.
- The **science is clear**; communities across the nation are **experiencing the health impacts** of climate change, including:
 - Elevated **ozone** and **particulate** air pollution, linked to asthma attacks, cardiovascular disease and premature death;
 - **Extreme weather patterns, such as heat and severe storms, cause droughts, wildfires and flooding** that destabilize communities, especially those least equipped to defend themselves; and
 - Increased **vector-borne diseases** by expanding seasons and geographic ranges for ticks, mosquitoes and other disease-carrying insects to roam.
- The **most vulnerable** – children, seniors, low income communities, some communities of color, and those with chronic disease – disproportionately bear the health impacts of climate change.
- **Bold action** is needed to address climate change by cleaning up major sources of carbon pollution including **power plants**, cars, trucks and other mobile sources.
- Communities must have the tools and resources to adapt to and **mitigate the unique impacts** of climate change in their communities.
- The **Climate Action Plan** will help cut carbon pollution and other greenhouse gases, preparing the U.S. to address climate impacts we can't avoid and to lead the world in our global climate efforts.
- We **commend President Obama** and his entire team for bringing greater awareness to the public health impacts of climate change.
- The public health, disease advocacy and medical community are **united in our efforts to protect the public from the risks of climate change**.
