

THE FACTS MAINE

Speak for Health

AN INITIATIVE OF THE
AMERICAN PUBLIC HEALTH ASSOCIATION

PUBLIC HEALTH FUNDING Strong investments in public health allow a state to carry out programs that improve health. Maine receives \$109 per person total from the Centers for Disease Control (CDC) and Prevention and the Health Resources Services Administration (HRSA) in public health funding. In 2020 fiscal year, the Prevention and Public Health Fund awarded the state over \$5.43 million in grants for community and clinical prevention efforts and improvements to public health infrastructure.

ACCESS TO CARE 8.0 percent of people in Maine do not have health insurance coverage compared to the national uninsured rate of 9.2 percent. The number of practicing primary care providers is also an important measure of health care availability. Maine has 330.8 active primary care providers per 100,000 people, ranking 3rd highest in the nation.

Notable Health Measures

- **High school graduation** 86.7 percent of students graduate from high school in Maine, ranking the state 22nd highest in the nation. This is a notable measure as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.
- **Violent Crime** The state has the lowest violent crime rate in the nation with 115 offenses per 100,000 people.
- **Air pollution** 5.3 micrograms of fine particles per cubic meter, ranking the state 7th lowest in air pollution in the nation. Poor air quality leads to reduced lung function, risk of asthma complications, heart attacks, heart failure, and death, and particularly impacts young children and older adults.

The Challenges Ahead

- **Tobacco use** 17.6 percent of adults in Maine smoke cigarettes, which is the same as the national percentage. Each year, 2,400 people die from smoking-related illnesses in Maine and \$811 million is spent on smoking-related health care.
- **Drug deaths** Maine had a drug-related death rate of 26.6 drug deaths per 100,000 population in 2020, ranking the state 14th highest for drug deaths in the nation.
- **Asthma** Maine has the highest rate of asthma in the nation, with 11.8% of adults diagnosed with asthma in 2020.
