April 27, 2021

The Honorable Patty Murray  
Chair  
Subcommittee on Labor, Health and Human Services, Education and Related Agencies  
Committee on Appropriations  
U.S. Senate

The Honorable Roy Blunt  
Ranking Member  
Subcommittee on Labor, Health and Human Services, Education and Related Agencies  
Committee on Appropriations  
U.S. Senate

The Honorable Rosa DeLauro  
Chair  
Subcommittee on Labor, Health and Human Services, Education and Related Agencies  
Committee on Appropriations  
U.S. House of Representatives

The Honorable Tom Cole  
Ranking Member  
Subcommittee on Labor, Health and Human Services, Education and Related Agencies  
Committee on Appropriations  
U.S. House of Representatives

Dear Chair Murray, Ranking Member Blunt, Chair DeLauro, and Ranking Member Cole:

Thank you for your leadership and support for our nation’s public health workforce and systems during the ongoing COVID-19 pandemic. As we continue to respond to COVID-19 and prepare to address the next emerging public health threat, the undersigned organizations representing patients, public health professionals, health information technology developers, health care providers, researchers, and scientists urge you to appropriate at least $250 million in Fiscal Year (FY) 2022 towards the public health Data Modernization Initiative (DMI) at the Centers for Disease Control and Prevention (CDC).

The DMI is a commitment to building the world-class data workforce and data systems that are ready for the next public health emergency. We are grateful to Congress for providing nearly $1 billion to date for CDC’s DMI through annual and supplemental appropriations. Now, we need robust, sustained, annual funding to complete the foundational investment of $1 billion and to ensure we are investing in public health systems and infrastructure, including at state and local health departments, that will keep pace with evolving technology.

The DMI is helping to create a standards-based interoperable public health infrastructure, ensuring all systems can communicate and share data seamlessly with one another; advancing standards so that information can be stored and shared across systems; and facilitating complete and timely reporting so that our public health system has essential data on race, ethnicity, pregnancy status, treatments, and co-morbidities that are critical for achieving equity in public health response.

We urge you to continue to prioritize public health data modernization at CDC by allocating at least $250 million in FY 2022. Rapidly evolving technology demands that public health keep pace with advancements by continually upgrading data systems and ensuring cybersecurity. The COVID-19 pandemic has shown starkly that public health has fallen behind over the past decade because of eroding infrastructure in data science and information technology. We cannot allow our foundational investments to become obsolete—we must build upon them and provide adequate sustained resources for public health to develop, implement, and maintain the data systems and technologies needed to train the next generation of data scientists. A robust, sustained commitment to transform today’s public health surveillance will ultimately improve America’s health and security.
Thank you for your consideration of these important issues. If you have questions, please contact Meghan Riley at mriley@dc-crd.com.

Sincerely,
