How Climate Change Affects Your Health

**Rising Temperatures**
- More frequent heatwaves
- Urban heat island effect
- Dehydration
- Heat stroke

**Extreme Weather**
- Increased flooding & storms
- More frequent droughts
- More intense wildfires
- Property loss
- Infrastructure damage
- Water contamination

**Air Quality**
- Increased pollution & GHG emissions
- Increased allergens
- More frequent heatwaves
- Increased waterborne illness
- Increased allergy-related illnesses
- Injury & death

**Vector-Borne Diseases**
- Changes in temperature and duration of warm season
- Expanded geographical range
- Changes in insect behaviors
- Increased cases of vector-borne diseases

**Health Effects**
- Aggravated cardiovascular illnesses
- Aggravated respiratory illnesses
- Mental health distress
- Waterborne illness

**Environmental Effects**
- More frequent heatwaves
- Changes in temperature and duration of warm season
- Changes in precipitation
- More frequent droughts
- Increased flooding & storms
- Increased waterborne illness
- Increased allergy-related illnesses
- Increased cases of vector-borne diseases

**Secondary Effects**
- Increased pollution & GHG emissions
- Increased allergens
- More frequent heatwaves
- Increased waterborne illness
- Increased allergy-related illnesses
- Increased cases of vector-borne diseases

**Vector-Borne Diseases**
- Changes in temperature and duration of warm season
- Expanded geographical range
- Changes in insect behaviors

**Air Quality**
