**THE FACTS:**

**Delaware**

**Public Health Funding:** Strong investments in public health allow a state to carry out programs that improve health. Delaware receives $31.34 per person in funding from CDC (8th in the nation) and $35.97 per person from HRSA (13th in the nation). The Prevention and Public Health Fund has awarded over $36 million in grants to Delaware since 2010 for community and clinical prevention efforts and improvements to public health infrastructure.

**Access to Care:** 5.7 percent of people in Delaware do not have health insurance coverage compared to the national uninsured rate of 8.6 percent. The number of practicing health care providers is also an important measure of health care availability. Delaware has 156.7 active primary care physicians per 100,000 people in comparison to the national rate of 149.7 practicing primary care physicians per 100,000 people. Delaware only has 44.3 dentists per 100,000 people, ranking the state 47th in the nation.

**Notable Health Measures**
- **Cardiovascular deaths:** Cardiovascular deaths have decreased 40.6 percent from 422.4 deaths per 100,000 people in 1990 to 250.7 deaths per 100,000 people in 2017.
- **Infectious disease:** Delaware ranks 18th for incidence of infectious disease in the nation, including chlamydia, pertussis, and Salmonella.
- **Tobacco use:** 17.7 percent of the adult population smokes cigarettes, ranking Delaware 27th in the nation. 29.8 percent of high school youth reported currently using any tobacco product and 9.9 percent currently smoke cigarettes. Each year, 1,400 people die from smoking-related illnesses in Delaware and $532 million is spent on health care costs due to smoking.

**The Challenges Ahead**
- **Drug deaths:** In the past ten years, drug deaths increased 147 percent from 8.1 deaths per 100,000 people to 20.0 deaths per 100,000 people.
- **Violent crime:** 509 offenses per 100,000 people in Delaware, 9th highest in the nation. Violent crimes may cause injuries, disability and early death. Additionally, violent crimes may cause long-term stress for families and communities, and interfere with leading a healthy lifestyle. However, violent crime can be prevented. Numerous programs and practices have shown that by addressing root causes it is possible to prevent violence.
