THE FACTS: Maryland

**Public Health Funding:** Strong investments in public health allow a state to carry out programs that improve health. Maryland receives $33.44 per person in funding from CDC (6th in the nation) and $26.47 per person from HRSA (31st in the nation). The Prevention and Public Health Fund has awarded over $126 million in grants to Maryland since 2010 for community and clinical prevention efforts and improvements to public health infrastructure.

**Access to Care:** 6.1 percent of people in Maryland do not have health insurance coverage, well below the national uninsured rate of 8.6 percent. The number of practicing health care providers is also an important measure of health care availability. Maryland has 184.9 active primary care physicians per 100,000 people, ranking 8th highest in the nation. Additionally, Maryland has 70.7 dentists per 100,000 people, ranking 9th highest in the nation.

**Notable Health Measures**
- **Tobacco use:** 13.7 percent of adults in Maryland smoke cigarettes, ranking the state 6th lowest in the nation. Still, each year, 7,500 people die from smoking-related illnesses in Maryland and $2.7 billion is spent on health care costs due to smoking.
- **High school graduation:** 87 percent of students graduate from high school in Maryland, which is above the national average of 83.2 percent of students. This is a notable measure as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.

**The Challenges Ahead**
- **Drug deaths:** In the past three years, drug deaths increased 45 percent from 12.2 to 17.7 deaths per 100,000 people.
- **Violent crime:** The state is ranked 40th in the nation with 472 offenses per 100,000 people. Violent crimes may cause injuries, disability and early death. Additionally, violent crimes may cause long-term stress for families and communities, and interfere with leading a healthy lifestyle. However, violent crime can be prevented. Numerous programs and practices have shown that by addressing root causes it is possible to prevent violence.
- **Low birthweight and infant mortality:** In Maryland, 8.6 percent of live births are low birthweight, ranking 35th in the nation. Low birthweight is associated with short- and long-term complications and an increased risk of infant mortality. The state is ranked 33rd in the nation for infant mortality with 6.6 deaths per 1,000 live births.
