THE FACTS:
Massachusetts

Public Health Funding: Strong investments in public health allow a state to carry out programs that improve health. Massachusetts receives $23.12 per person in funding from CDC (23rd in the nation) and $37.66 per person from HRSA (10th in the nation). The Prevention and Public Health Fund has awarded over $126 million in grants to Massachusetts since 2010 for community and clinical prevention efforts and improvements to public health infrastructure.

Access to Care: 2.5 percent of people in Massachusetts do not have health insurance coverage, well below the national uninsured rate of 8.6 percent. The number of practicing health care providers is also an important measure of health care availability. Massachusetts has 237.1 active primary care physicians per 100,000 people, ranking 2nd highest in the nation. Additionally, Massachusetts has 80.7 dentists per 100,000 people, which is the highest in the nation.

Notable Health Measures
- Tobacco use: 13.6 percent of adults in Massachusetts smoke cigarettes, ranking the state 5th lowest in the nation. Yet, each year, 9,300 people die from smoking-related illnesses in Massachusetts and $4.1 billion is spent on health care costs due to smoking.
- Obesity: While the state boasts the 2nd lowest adult obesity rate in the nation – 23.6 percent of adults are obese – the obesity rate has more than doubled over the past two and a half decades. Obesity contributes to poor general health and is a leading factor in preventable diseases.

The Challenges Ahead
- Drug deaths: In the past five years, drug deaths increased 69 percent from 11.7 to 19.8 deaths per 100,000 population.
- Excessive drinking: 20.1 percent of the adult population reports excessively drinking, ranking the state as the 16th highest in the nation. Excessive alcohol use can lead to fetal damage, liver diseases, high blood pressure, cardiovascular diseases and other major health problems.
- Violent crime: The state is ranked 23rd in the nation with 377 offenses per 100,000 people. The societal costs of violent crimes can be staggering. Violent crimes may cause injuries, disability and early death. Additionally, violent crimes may cause long-term stress for families and communities, and interfere with leading a healthy lifestyle. However, violent crime can be prevented. Numerous programs and practices have shown that by addressing root causes it is possible to prevent violence.
