THE FACTS: Mississippi

Public Health Funding: Strong investments in public health allow a state to carry out programs that improve health. Mississippi receives $25.78 per person in funding from CDC (19th in the nation) and $43.50 per person from HRSA (9th in the nation). The Prevention and Public Health Fund has awarded over $37 million in grants to Mississippi since 2010 for community and clinical prevention efforts and improvements to public health infrastructure.

Access to Care: 11.8 percent of people in Mississippi do not have health insurance coverage, well above the national uninsured rate of 8.6 percent. The number of practicing health care providers is also an important measure of health care availability. Mississippi has 105.9 active primary care physicians per 100,000 people, ranking 4th lowest in the nation. Additionally, Mississippi has 42.2 dentists per 100,000 people, ranking 2nd lowest in the nation.

Notable Health Measures

- Physical inactivity: 30.3 percent of adults in Mississippi report doing no physical activity in the past 30 days, ranking the state 49th in the nation for physical activity.
- Obesity: Mississippi has the 2nd highest obesity rate in the nation with 37.3 percent of adults obese. Obesity contributes to poor general health and is a leading factor in preventable diseases.
- High school graduation: 75.4 percent students in Mississippi graduate from high school, ranking 4th lowest in the nation. This is of public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.

The Challenges Ahead

- Tobacco use: 22.7 percent of adults smoke cigarettes in Mississippi, ranking the state 5th highest in the nation. Each year, 5,400 people die from smoking-related illnesses in Mississippi and $1.2 billion is spent on health care costs due to smoking.
- Cancer deaths: The state has the 3rd highest cancer death rate in the nation with 226.7 deaths per 100,000 people.
- Low birthweight and infant mortality: 11.4 percent of live births in Mississippi are low birthweight, the highest rate in the nation. Low birthweight is associated with short- and long-term complications and an increased risk of infant mortality. The state also has the highest rates of infant mortality in the nation with 8.8 deaths per 1,000 live births.
