

AN INITIATIVE OF THE AMERICAN PUBLIC HEALTH ASSOCIATION

**PUBLIC HEALTH FUNDING** Strong investments in public health allow a state to carry out programs that improve health. Iowa receives \$171 total per person from the Centers for Disease Control and Prevention (CDC) and the Health Resources Services Administration (HRSA). In fiscal year 2023, the Prevention and Public Health Fund awarded over \$5.41 million in grants to Iowa for community and clinical prevention efforts and improvements to public health infrastructure.

**ACCESS TO CARE** 4.5 percent of people in Iowa do not have health insurance coverage, which is well below the national uninsured rate of 8.0 percent. The number of practicing primary care providers is also an important measure of health care availability. Iowa has 239.6 active primary care providers per 100,000 people. Nationally, there are 232.0 practicing primary care providers per 100,000 people.

## **Notable Health Measures**

- **High school graduation** Iowa has the 2nd highest high school graduation rate in the U.S. with 91.8 percent of students graduating from high school. This is a notable measure as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.
- Drug deaths lowa has the 3rd lowest rate of deaths due to drug injury in the nation with 15.4 deaths per 100,000 people.
- **Air pollution** lowa ranks 27th for air pollution nationally, with a measure of 7.7 micrograms of fine particles per cubic meter. Poor air quality can have severe health effects and impact a large number of people, particularly impacting young children and older adults.

## **The Challenges Ahead**

- Excessive drinking 22.6 percent of the adult population in lowa reports drinking excessively, ranking the state 3rd highest in the nation. Excessive alcohol use can lead to fetal damage, liver diseases, high blood pressure, cardiovascular diseases and other major health problems.
- **Obesity rate** Obesity contributes to poor general health and is a leading factor in preventable diseases. The obesity rate has steadily increased over the decades with 37.4 percent of adults in lowa obese.
