

THE FACTS COLORADO

Speak
for **Health**

AN INITIATIVE OF THE
AMERICAN PUBLIC HEALTH ASSOCIATION

PUBLIC HEALTH FUNDING Strong investments in public health allow a state to carry out programs that improve health. Colorado receives \$132 per person in funding from the Centers for Disease Control and Prevention (CDC) and the Health Resources Services Administration (HRSA). In fiscal year 2023, the Prevention and Public Health Fund awarded \$6.67 million in grants to Colorado for community and clinical prevention efforts and improvements to public health infrastructure.

ACCESS TO CARE 6.7 percent of people in Colorado do not have health insurance coverage compared to the national uninsured rate of 7.9 percent. The number of practicing primary care providers is also an important measure of health care availability. Colorado has 298.6 active primary care providers per 100,000 people in comparison to 283.4 practicing primary care providers per 100,000 people nationally.

Notable Health Measures

- **Obesity** Colorado has the lowest obesity rate in the nation, with only 24.9 percent of adults in the state obese.
- **Mental distress** Colorado ranks 25th in the nation for rates of mental distress, with 15.5 percent of adults reporting that their mental health was not good on 14 or more days within the past 30 days.
- **Chlamydia** Colorado reported 456.3 new cases of chlamydia per 100,000 population, compared to a national average of 495.0 cases.

The Challenges Ahead

- **High school graduation** 82.3 percent of students graduate high school in Colorado, ranking the state the 9th lowest in the nation. This is of public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors. The health benefits of educational attainment accumulate and as a result will also impact the community level and social/cultural context.
- **Low birthweight** 9.9 percent of infants born in Colorado weigh less than 5 lbs, 8 oz, ranking the state 8th highest in the nation for rates of low birthweight.
