## INTEREST OF THE *AMICI CURIAE*<sup>1</sup>

The American Public Health Association (APHA), founded in 1872, is the leading professional organization for public health professionals in the United States. APHA shares the latest research and information, promotes best practices, and advocates for public health issues and policies grounded in scientific research. APHA represents more than 24,000 individual members and is the only organization that combines a 150-year perspective, a broad-based member community, and a focus on influencing federal policy to improve the public's health.

The individual *amici* are 115 distinguished deans and professors of public health and of health law and policy with deep expertise in policies that promote population health and alleviate barriers to care. They are identified in the Appendix.

The Robert Wood Johnson Foundation (RWJF) is a leading national philanthropy dedicated to taking bold leaps to transform health in our lifetime. A core feature of RWJF's philanthropic approach is funding research to identify evidence-based methods of improving health outcomes for all. As part of those efforts, RWJF has supported research demonstrating the benefits of comprehensive coverage for no-cost preventive health services.

Trust for America's Health (TFAH) is a nonpartisan, nonprofit organization focused on public health research and policy. TFAH is committed to promoting optimal health for every person and community and

---

<sup>1</sup> Pursuant to Rule 37.6, *amici* affirm that no counsel for a party authored this brief in whole or in part and that no person other than *amici* and their counsel made a monetary contribution to its preparation or submission.

making health equity foundational to policymaking at all levels. The organization's work is focused on the antecedents of poor health and on policies and programs to advance an evidence-based public health system that is ready to meet the challenges of the 21st century. TFAH develops reports and other resources and initiatives to educate the public and recommends policies to promote health and wellbeing and to make the prevention of illness and injury a national priority.

APHA has a strong interest in ensuring the continued availability of cost-free coverage for preventive healthcare, given its mission to promote public health through evidence-based policies. The individual *amici*, RWJF, and TFAH all share that interest. *Amici* file this brief to explain the importance of the cost-free preventive services requirements and the significant harm to public health that will result if those requirements are invalidated.

## **INTRODUCTION AND SUMMARY OF ARGUMENT**

The court of appeals' decision effectively invalidates a critically important provision of the Affordable Care Act (ACA) that ensures more than 150 million Americans' access to essential life-saving tests and treatments. *Amici* submit this brief to explain that, if the ruling is permitted to stand, deadly diseases will not be detected and important treatments will be unavailable—resulting in serious illnesses, chronic medical conditions, and deaths that otherwise would have been prevented.

Prior to enactment of the ACA, a significant number of health insurance plans failed to cover preventive tests and other medical services for the detection

and prevention of major diseases. Plans that did provide coverage often required patients to pay a share of the cost—out of pocket and at the time of service—which deterred many patients from obtaining these life-saving services.

To protect Americans' health, the ACA requires private insurance plans to cover, cost-free, four essential categories of preventive services. This requirement extends beyond ACA marketplace health insurance plans and includes virtually all employer-sponsored health insurance and other private insurance.

One of those preventive services categories is “evidence-based items or services” with an A or B recommendation from the U.S Preventive Services Task Force (USPSTF). See 42 U.S.C. § 300gg-13(a)(1). The USPSTF is a panel of experts that rigorously evaluates peer-reviewed scientific evidence and recommends especially valuable preventive services. See Pet. Br. 4-5.

These services save, and dramatically improve, Americans' lives by identifying and addressing health risks early, so they can be treated more effectively—by preventing diseases from occurring at all and by protecting all Americans against the risk of transmission of communicable diseases. They are critical to reducing the incidence and severity of numerous diseases and life-threatening conditions, and are especially important to maternal and child health. The ACA's requirement of cost-free coverage has dramatically increased use of these vital services by all Americans.

The court of appeals' decision threatens this requirement for dozens of life-saving services recommended by the USPSTF—every preventive service

given an A or B recommendation after the enactment of the ACA in 2010. Without the ACA's requirement, some companies and insurers will re-impose cost-sharing. Some may eliminate coverage completely.

Without cost-free coverage, many Americans will not use these services: studies consistently demonstrate that when people are required to pay part of the cost of preventive care, they often do not obtain it. That leads to more serious illnesses and even deaths among the individuals deprived of coverage. It also affects Americans more broadly, because many of the covered services prevent and treat illnesses that, if not detected and treated, can be spread among the population generally.

This brief discusses the particular preventive services affected, and the adverse public health consequences of the elimination of the cost-free coverage guarantee for those services.

But the court of appeals' determination, if upheld, will do more than eliminate cost-free coverage for existing post-2010 USPSTF recommendations. It will mean that the covered services cannot be adjusted to account for advances in prevention and detection of serious diseases. New discoveries can include more effective detection techniques that reveal the onset of a disease earlier and more accurately. Or new medicines that better prevent the onset of disease, or that have fewer side-effects. Or that existing detection or preventive services should be extended to a broader age-group or other population because new evidence shows greater risk of contracting the disease.

This Court should implement Congress's clear intent to enable Americans to benefit from continued scientific advances in detecting and preventing

serious diseases and reject a determination that would set in stone 2010-era science.

The Court therefore should reverse the judgment below—and thereby preserve these critical benefits for more than 150 million Americans.

## ARGUMENT

### I. THE COURT OF APPEALS' RULING WILL CAUSE AMERICANS TO SUFFER PREVENTABLE ILLNESS AND EVEN DEATH.

Congress determined that to promote the public health—and prevent Americans from suffering from serious diseases, including diseases that can lead to death—it is necessary to remove barriers to Americans' use of preventive health services. Congress therefore included in the ACA provisions mandating that insurers cover many of those services cost-free. See 42 U.S.C. § 300gg-13(a).

Serious harm to Americans' health will be the inevitable consequence of upholding the court of appeals' determination and eliminating the preventive services requirement for all of the services rated A or B by USPSTF since 2010—which also will bar extension of the cost-free coverage requirement to new life-saving preventive services discovered as the result of advances in medical science.

#### A. The court of appeals' decision jeopardizes guaranteed cost-free coverage for life-saving services.

The holding below jeopardizes guaranteed cost-free coverage for at least two dozen services with USPSTF A or B recommendations published or updated after 2010. These life-saving services include:

- ***Lung cancer screening for high-risk persons:***<sup>2</sup> Lung cancer is the second most common cancer and the leading cause of cancer death in the United States.<sup>3</sup> Studies demonstrate that this cancer is significantly more treatable when detected early,<sup>4</sup> which is why the USPSTF recommended screenings in 2013 and expanded that recommendation to apply to more persons in 2021.<sup>5</sup>
- ***Colorectal cancer screening for adults 45-49:***<sup>6</sup> Colorectal cancer is the Nation's third leading cause of death from cancer, and its incidence has increased for adults 40-49 years old.<sup>7</sup> Colorectal cancer screening is especially beneficial because it involves removing precancerous growths.<sup>8</sup> Screening not only detects cancer early, but keeps it from developing in the first place. The USPSTF's 2021

recommendation provides this benefit to 15-17.5 million additional people, by expanding to include adults 45-49 years old.<sup>9</sup>

- ***Statins to Prevent Cardiovascular Disease:***<sup>10</sup> Cardiovascular disease is the leading cause of death in the United States.<sup>11</sup> For those at increased risk, statins effectively reduce both cardiovascular-disease events and mortality.<sup>12</sup> The USPTSF therefore recommended statins for at-risk adults 40-75 years old in 2016 and 2022, enabling cost-free access to this potentially life-saving drug.<sup>13</sup>
- ***Medication to Reduce Risk of Breast Cancer:***<sup>14</sup> Breast cancer is the second leading cause of cancer death; and an estimated one in eight women will develop breast cancer at some point in their lifetime.<sup>15</sup> In 2018, an estimated 266,120 new cases of breast cancer were diagnosed in women in the United States, and an estimated 40,920 women died of breast cancer—14% of all cancer deaths in

women.<sup>16</sup> Multiple techniques exist for determining whether women over 35 face an increased risk of developing breast cancer.<sup>17</sup> Medications—such as tamoxifen, raloxifene, or aromatase inhibitors—can reduce that risk of developing cancer by approximately 40%.<sup>18</sup> The USPSTF recommendation covers the cost of the risk assessment and, if an increased risk is found, the cost of the risk-reducing medications.<sup>19</sup>

- ***Prediabetes and Type 2 Diabetes Screening***:<sup>20</sup> Diabetes is the leading cause of kidney failure and of new cases of blindness among adults in the United States; is associated with increased risks of cardiovascular disease and liver disease; and was estimated to be the seventh leading cause of death in the United States in 2017.<sup>21</sup> Significant percentages of people with diabetes are not aware that they have the condition.<sup>22</sup> Providing treatment to

<sup>21</sup> *Id.* at 736.

<sup>22</sup> *Ibid.* (“[o]f persons with diabetes, 21.4% were not aware of or did not report having diabetes, and only 15.3% of persons with

individuals found to have diabetes reduces mortality; and providing preventive interventions to those found to be prediabetic reduces progression to diabetes and can address the risk of cardiovascular disease associated with prediabetes. The USPSTF-recommended screening of those with the greatest risk—all adults aged 35-70 who are overweight or obese—thus provides important health benefits.<sup>23</sup> And the current recommendation is a significant expansion from the recommendation at the time the ACA was enacted, which was limited to adults with high blood pressure, and provided screening only for type 2 diabetes, not for prediabetes.<sup>24</sup>

- ***Screening for Hepatitis B Infection in Adults:***<sup>25</sup> 862,000 Americans are estimated to be living with chronic infection of the hepatitis B virus.<sup>26</sup> For 15-40% of these individuals, chronic infection will develop into cirrhosis, liver cancer, or liver failure, which can be deadly.<sup>27</sup> Crucially, it is estimated that 68% of people with chronic hepatitis B are not aware of their infection, and may not have symptoms

breast cancer by 45-65% by age 70;<sup>46</sup> and exercise interventions for at-risk adults 65 and older to prevent falls, which are the leading cause of injury-related morbidity and mortality among older American adults.<sup>47</sup>

Saving lives and preventing illness are the most important benefits of cost-free coverage for these services, which not only promote the health of the insured but in many cases also protect third parties and the broader population from further transmission of disease. In addition, the services also reduce healthcare costs.<sup>48</sup> Illnesses that are prevented need not be treated at all, saving significant health costs. As one Senator explained, preventing patients from developing colon cancer through a screening that costs “a couple hundred dollars” is much more cost-effective than spending “tens of thousands of dollars” having to treat it.<sup>49</sup>

Upholding the court of appeals’ determination will not just eliminate the cost-free coverage requirements with respect to the services just described. It is certain

<sup>49</sup> 155 Cong. Rec. 32890 (2009) (statement of Sen. Cardin).

that advances in medical science will develop new, improved methods of detecting or preventing serious illness—after all, the expanded and new services discussed above were adopted over the last 14 years. But the cost-free coverage of new services that satisfy the USPSTF’s guidelines would be precluded by the court of appeals’ determination. And that result would be especially harmful when science develops a new detection or prevention methodology that yields better results than an older procedure. The court of appeals’ determination would provide cost-free coverage only for the outdated services and not for the improved services.

This Court should implement Congress’s clear intent to enable Americans to benefit from continued scientific advances in detecting and preventing serious diseases and reject a determination that would set in stone 2010-era science.

**B. The ACA’s requirement of cost-free coverage has significantly increased Americans’ use of these critical services.**

The Department of Health and Human Services (HHS) estimates that 151.6 million people, as of January 2020, were enrolled in private health insurance plans subject to the ACA’s preventive services requirement.<sup>50</sup> By eliminating cost-sharing, the ACA has increased access to and utilization of preventive services. Indeed, approximately 100 million Americans used the free preventive services guaranteed by

---

<sup>50</sup> *Access to Preventive Services* at 3, 5.

the ACA in 2018.<sup>51</sup> The number is likely even higher today: the number of Americans with private health insurance coverage has increased since then, and therefore the use of preventive services surely has increased as well.<sup>52</sup>

There can be no doubt that eliminating cost-sharing has increased Americans' use of preventive services. An extensive review of 35 academic studies found that eliminating cost-sharing "led to increases in utilization" of preventive services since the ACA was enacted, including "substantial increases" among the financially vulnerable.<sup>53</sup> One study, for example, found increased use of a variety of preventive services at community health centers across 14 states.<sup>54</sup>

Based on estimated population distribution by age, that increase corresponds to over 4 million additional individuals with private health insurance. See Kaiser Family Foundation, *Population Distribution by Age* (last visited Feb. 23, 2025), <https://bit.ly/3HkyDfu>.

<sup>53</sup> Hope C. Norris et al., *Utilization Impact of Cost-Sharing Elimination for Preventive Care Services: A Rapid Review*, 79 *Med. Care Res. & Rev.* 175, 192, 194 (2022); see also *Access to Preventive Services* at 10; Xuesong Han et al., *Has Recommended Preventive Service Use Increased After Elimination of Cost-Sharing As Part of the Affordable Care Act in the United States?*, 78 *Prev. Med.* 85 (2015), <https://bit.ly/41sg8ht>.

<sup>54</sup> Brigit Hatch et al., *Impacts of the Affordable Care Act on Receipt of Women's Preventive Services in Community Health*

This increase is a direct result of the elimination of cost-sharing. Multiple studies demonstrate that “the presence of cost-sharing, even if the amount is relatively modest, deters patients from receiving care.”<sup>55</sup>

One study, for example, found that patient cost-sharing produced a 9-10% decline in use of mammograms and 8-10% decline in use of pap smears.<sup>56</sup> Indeed, prior to the ACA, 9% of insured men and 13% of insured women—and 31% of low-income men and 35% of low-income women—reported postponing preventive services because of cost.<sup>57</sup> And a survey of 2,199 Americans conducted after the district court’s ruling found that 40% of respondents would not utilize most preventive services without cost-free coverage.<sup>58</sup> One

For example, 46% of respondents said they would not pay for prediabetes screening and 42% would not pay for cardiovascular preventive services. Morning Consult, *National Tracking Poll*

study found that studies have found that cost sharing even “in the range of \$1 to 5, are associated with the reduced use of care, including necessary services.”<sup>59</sup>

These results are unsurprising, given that cost generally is a major barrier to healthcare access. In 2022, 28% of American adults, including 26% of insured adults, went without medical care because they could not afford it.<sup>60</sup> Moreover, since preventive services “do not address acute health problems” —but rather prevent such problems from occurring—people are more likely to “skip [preventive] care” in particular.<sup>61</sup> And in deciding whether to pay for preventive care, individuals likely will not consider the substantial benefits to third parties and population health generally that flow from broad use of preventive services.

In sum, abundant academic research demonstrates that “[c]onsumer cost-sharing \* \* \* diminish[es] utilization of preventive services.”<sup>62</sup>

<sup>62</sup> Norris, *supra* n.53, at 175.

**C. Without the federal requirement, companies and insurers will re-impose cost-sharing, which will reduce the use of life-saving services.**

The court of appeals' decision would allow companies and insurers to re-impose cost-sharing for preventive services recommended since 2010. Some companies and insurers will do just that—and many may do so with just sixty days' notice to covered individuals.<sup>63</sup>

That was the case before the ACA, and it is the reason why Congress enacted the preventive services requirement. Thus, HHS estimated in 2015 that the preventive services requirement had brought 76 million Americans expanded cost-free access that they previously lacked.<sup>64</sup>

A survey of large employers confirms this reality. Eight percent of employers reported that, without the ACA's requirement, they would impose cost-sharing for preventive services while another 12% were

---

<sup>63</sup> See Declaration of Jeff Wu, Deputy Director for Policy in the Center for Consumer Information & Insurance Oversight, Centers for Medicare & Medicaid Services, ROA.2170-71; Declaration of Lisa Gomez, Assistant Secretary for Employee Benefits, Dep't of Labor, ROA.2178; see also 42 U.S.C. § 300gg-15(d)(4) (requiring group health plans and health insurance issuers to provide 60 days' notice of material modifications).

<sup>64</sup> Assistant Sec'y for Planning & Evaluation, U.S. Dep't of Health and Human Servs., *The Affordable Care Act Is Improving Access to Preventive Services for Millions of Americans* 1 (May 14, 2015), <https://bit.ly/43RpzIP>.

uncertain whether they would.<sup>65</sup> Even if only 8-20% of employers impose cost-sharing, millions of Americans would be affected. And once some insurers and companies impose cost-sharing, it may become a competitive disadvantage not to, because much of the cost savings from preventive care will not accrue until after the end of the covered year—because that is when costlier treatments will be avoided. This may lead even more insurers and companies to drop cost-free coverage.

Indeed, that is what companies have done in other contexts where cost-free coverage is not required. For example, although IRS regulations allow companies' health savings account (HSA)-eligible plans to cover the cost of certain services related to chronic conditions even when the insured has not satisfied the deductible, a recent study shows only 8% of companies covered the costs of all of those services.<sup>66</sup>

Many patients will forgo life-saving preventive services if required to pay for them, because even “modest” cost-sharing “deters patients from receiving care.”<sup>67</sup> In addition, by replacing the ACA's clear rules for preventive services coverage with the choices of particular insurers, the court of appeals' ruling will leave providers and patients uncertain as to what services are or are not covered cost-free. Faced with that uncertainty, providers may stop recommending, and

---

<sup>65</sup> Employee Benefit Res. Inst., *Will Employers Introduce Cost Sharing for Preventive Services? Findings from EBRI's First Employer Pulse Survey 2* (Oct. 27, 2022), <https://bit.ly/41tbAY3>.

<sup>66</sup> Employee Benefit Res. Inst., *Employer Uptake of Pre-Deductible Coverage for Preventive Services in HSA-Eligible Health Plans 1* (Oct. 14, 2021), <https://bit.ly/3N7RqhR>.

<sup>67</sup> Norris, *supra* n.53, at 175.

patients may stop using, crucial services—even if some plans retain cost-free coverage.<sup>68</sup> Providers who are uncertain what is covered may err on the side of not providing or prescribing services, while patients may not even seek services they suspect might not be covered.

One recent study documents the impact of re-introducing cost-sharing for victims of colorectal cancer. If the decision below is upheld, cost-sharing will not be required for the USPSTF’s 2021 screening recommendations, which lowered the recommended age from 50 to 45 and expanded its screening recommendation to cover, for all age groups, polyp removal as well as follow-up colonoscopies after a positive noninvasive test. See also page 6 & nn.6-9, *supra*.

The study found that “the benefits of [colorectal cancer] screening would be substantially reduced through later screening initiation and lower ongoing screening participation.”<sup>69</sup> It found that the projected decline in screening participation due to cost sharing would lead over time to an increase in colorectal cancer incidence by 5.1% and an increase in deaths due to colorectal cancer of 9.1%.<sup>70</sup>

---

<sup>68</sup> Michele Late, *Court Ruling on Prevention Coverage ‘Disastrous for Public Health’*, Pub. Health Newswire (Mar. 31, 2023), <https://bit.ly/3UWSqXX> (“The confusion and uncertainty will no doubt be a deterrent to early and effective life-saving interventions.”).

<sup>69</sup> Rosita Van Den Puttelaar, et al., *Implications of the Initial Braidwood v. Becerra Ruling for Colorectal Cancer Outcomes: a Modeling Study*, J. Nat’l Cancer Inst. 1, 2 (2024), <https://doi.org/10.1093/jnci/djae244>.

<sup>70</sup> *Id.* at 1.

In sum, the court of appeals' decision will lead to fewer patients receiving life-saving preventive healthcare. Patients across the Nation may miss cancer screenings and other important services, including critical maternal healthcare. Others will contract diseases that could have been avoided. Without early detection and treatment, more Americans will suffer serious illness and even death.

## II. THE PREVENTIVE SERVICES REQUIREMENT IS CONSTITUTIONAL.

*Amici* agree with the government that Congress's reliance on the expertise of the USPSTF to identify one category of preventive services warranting cost-free coverage does not violate the Appointments Clause. See Pet. Br. 19-38.

Moreover, any possible constitutional concern can be addressed by severing 42 U.S.C. § 299b-4(a)(6), the provision stating that USPSTF members and the Task Force's recommendations "shall be independent and, to the extent practicable, not subject to political pressure." As the government explains (at 38-45), that is the only provision that could possibly negate the Secretary's authority to oversee the USPSTF.

This Court consistently holds that "severing any 'problematic portions [of a statute] while leaving the remainder intact'" is the proper approach "when confronting a constitutional flaw in a statute." *Free Enter. Fund v. Pub. Acct. Oversight Bd.*, 561 U.S. 477, 508 (2010) (quoting *Ayotte v. Planned Parenthood of N. New England*, 546 U.S. 320, 328-329 (2006)); see also *United States v. Arthrex, Inc.*, 594 U.S. 1, 23 (2021) (Roberts, C.J., joined by Alito, Kavanaugh, and Barrett, JJ.); *id.* at 44 (Breyer, J., joined by Sotomayor and Kagan, JJ.) (concurring in remedial holding);

*Seila Law LLC v. Consumer Fin. Prot. Bureau*, 591 U.S. 197, 232-38 (2020) (Roberts, CJ., joined by Alito and Kavanaugh, JJ.); *id* at 261 (Kagan, J., joined by Ginsburg, Breyer, and Sotomayor, JJ.) (concurring in the judgment with respect to severability).

That course is particularly appropriate here, given the important protections that the USPSTF preventive services provision provides to more than 150 million Americans.

**CONCLUSION**

The judgment of the court of appeals should be reversed.

Respectfully submitted.
