

Prevention and Public Health Fund

Dedicated to improving
our nation's public health

Fact Sheet

The Prevention and Public Health Fund is the nation's first mandatory funding stream dedicated to improving the public's health.

Why was the Prevention and Public Health Fund created?

The United States has the potential to have one of the healthiest populations in the world, but we currently spend too much and achieve too little. Our per capita health spending is nearly twice the average spent by other industrialized nations, but we rank 27th out of 36 such nations in terms of life expectancy.¹ Also striking is the fact that only about 3 percent of our health care spending is focused on prevention and public health, when 75 percent of our health care costs are related to preventable conditions.^{2,3}

The Affordable Care Act took an important first step toward addressing these issues by creating a mandatory fund, the Prevention and Public Health Fund. By law, the fund must be used “to provide for expanded and sustained national investment in prevention and public health programs to improve health and help restrain the rate of growth in private and public health care costs.”⁴

Already, the fund is being used to support a variety of community prevention and clinical prevention programs, to bolster the public health infrastructure and workforce, and to expand public health research and tracking efforts. Prevention and Public Health Fund dollars are going to programs at the local, state and federal levels that fight obesity, curb tobacco use and increase access to preventive care services. Funding is also helping state and local governments respond to public health threats and outbreaks.

How much money is in the Prevention and Public Health Fund?

On December 18, 2015, President Barack Obama signed the Consolidated Appropriations Act, 2016 into law allocating the full \$1 billion available for the prevention fund in FY 2016. More than \$892 million was transferred to the Centers for Disease Control and Prevention for activities to address heart disease, tobacco control, diabetes prevention and

other critical public health priorities. The remaining funds went to the Substance Abuse and Mental Health Services Administration and the Administration for Community Living's Administration on Aging.

The Prevention and Public Health Fund in FY 2016	
Amount originally authorized by the ACA in 2010	\$2 B
Amount authorized after February 2012 cut	- \$1 B = \$1 B
FY 2016 sequestration cut to the fund	- \$68 M
Amount remaining for prevention fund public health activities in FY 2016	= \$932 M

The ACA authorized \$18.75 billion for the fund between FY 2010 and

FY 2022 and \$2 billion per year after that. Annual funding levels started at \$500 million in FY 2010, and were meant to rise to \$2 billion per year by FY 2015. The mandatory nature was meant to protect the funding stream from reduction or elimination during the annual appropriations process.

However, Congress has the ability to eliminate the fund or redirect money from it to pay for non-public health legislative proposals, but this requires new legislation to be passed that amends the ACA. For example, in

February 2012, Congress passed and the president signed legislation that cut the fund by \$6.25 billion over

nine years (FYs 2013-21), in order to offset a scheduled cut to Medicare physician payments. See figure

to right for annual funding levels before and after this cut. The fund has also been cut by sequestration, automatic spending cuts to most

federal programs that are scheduled to reduce the fund through 2023

unless members of Congress replace sequestration with a balanced approach to deficit reduction.

In FY 2016, sequestration cut \$68 million leaving \$932 million for prevention and wellness activities.

Prevention and Public Health Fund annual amounts

Why is the Prevention and Public Health Fund important?

According to recent research, investments such as the Prevention and Public Health Fund have the potential to improve health outcomes and reduce costs. For example, every 10 percent increase in funding for community-based public health programs is estimated to reduce deaths due to preventable causes by 1 to 7 percent, and a \$2.9 billion investment in community-based disease prevention programs was estimated to save \$16.5 billion annually within five years (in 2004 dollars).^{5,6}

The United States faces significant health and fiscal challenges that could be mitigated by a better and more reliably funded public health system. The Prevention and Public Health Fund is a vital part of the effort to create such a system.
